## Porcelánico

### 1 Rock & Rock 120

Savia	48
Fierro	49
Lavagna	49
New Look	50
Packstone	50
Pietra Serena	51
Quartz Ocre	52
Sandstone	52
Travertino	53
York	53
Zen	54

### 1 Rock & Rock

Cadi	54
Titanium	55
Montana	56
Natural	57
Quartz	58
Red Rock	59
Shellstone	59

### 2 Top Green

Green Earth	62
Green Urban	63

### 3 Star Tuttomassa

Avila	66
Bengala	68
Calgary	69
Duomo	69
Gibson	112
Gobi	126
Kappa	70
Louvre	70
Metropolitan	71
Navarra	72
Norway	73
Pietra Damasco	74
Polar	75
Pret a Porter	76
Protos	76
Sahara	133
Sibila	134
Siros	78
Ypsilon	78

### 4 Porcellanato

Aran	80
Arles	81
Granada	82
Imperia	125
Lavica/Skintech Lavica	82
Medici	83

Michigan	84
Nuss	85
Poblet	86
Polo	132
Serenity	86
Sirocco	87
Street	88
Tahiti	136
Talia	88
Tempo	116

### 5 Stratos

Abi	90
Adara	90
Antica	91
Apolo	91
Artic	92
Atlas	92
Orion	93
Quadra	94

## Pavimento

### 6 Golden Gres

Acropolis	118
Adelia	118
Alicante	119
Ampurias	96
Apia	119
Ariel	120
Bolzano	96
Corinto	97
Cobra	110
Delhi	122
Destiny	123
Essence	111
Feel	124
Formentera	124
Geo	125
Gibson	112
Gobi	126
Icaria	97
Isolda	127
Jamaica	98
Kenia	98
Khan	127
Languedoc	99
Leather	100
PG 1N	101
Lyon	102
Rainbow	113
Sanremo	102
Sahara	133
Sibila	134
Sincro	115

Smart	103
Thassos	137
Touch	116

### 7 Skygres

Amalfi	106
Aruba	120
Corfu	122
Delfos	106
Diana	123
Magnet	107
Orta	131
Samos	108
Vulcano	108
Zeus	135

## Revestimento

### 8 Revestimento panorámico

Chic	110
Cobra	110
Essence	111
Gibson	112
Khan	112
Rainbow	113
Rainbow Sunset	114
Sincro	115
Tempo	116
Touch	116

### 9 Revestimento y pavimento coordinado

Acropolis	118
Adelia	118
Alicante	119
Apia	119
Ariel	120
Aruba	120
Cadiz	121
Chester	121
Corfu	122
Delhi	122
Destiny	123
Diana	123
Feel	124
Formentera	124
Geo	125
Imperia	125
Gobi	126
Isolda	127
Khan	127
Leather	128
Lucania	129
Magnet	129
Messina	130

Newport	131
Orta	131
Polo	132
Sahara	133
Sibila	134
Reflex	135
Zeus	135
Tahiti	136
Thassos	137

### 10 Mosaico

Adelaida	140
Alicante	140
Aurora	141
Baltimore	141
Boston	142
Imperia	142
Milano	143
Odeon	143
Osaka	144
Rainbow	144
Sand	145
Tahiti	145
Tarento	146

### 11 Blanco

Durban	148
Millenium	149
Olimpia	150
Ondas	150
White Albatros	150
White Albion	151
White Alpes	152
White Calypso	154
White Cerler	155
White Fenix	156
White Gredos	156
White Montreal	157
White Snow	158
White Toronto	159

### 12 Decorados

Coral	162
Rock Art	162

## Grupos de utilización

Gruppi di uso | Grupos de utilização | Groupes d'utilisation |  
Usage groups | Anwendungsgruppe | Группы использования  
| 的应用等级

Para zonas de muy poco tránsito  
Per ambienti sottoposti a traffico leggero  
Para zonas de muito pouco trânsito  
Zones très peu passantes  
For zones with very little traffic  
Für sehr wenig begangene Bereiche  
Для мест с очень небольшим движением  
用于通行量极少的区域

Para zonas de poco tránsito  
Per ambienti sottoposti a traffico medio  
Para zonas de muito pouco trânsito  
Zones peu passantes  
For zones with little traffic  
Für wenig begangene Bereiche  
Для мест с небольшим движением  
用于通行量较少的区域

Para zonas de tránsito moderado  
Per ambienti sottoposti a traffico medio forte  
Para zonas de trânsito moderado  
Zones moyennement passantes  
For zones with moderate traffic  
Für mittelstark begangene Bereiche  
Для мест с умеренным движением  
用于通行量一般的区域

Para zonas de mucho tránsito  
Per ambienti sottoposti a traffico intenso  
Para zonas de muito trânsito  
Zones très passantes  
For zones with high traffic  
Für stark begangene Bereiche  
Для мест с большим движением  
用于通行量较高的区域

Pavimentos para tránsito intenso  
Cumplen especificaciones PEI V, resistencia alta  
Pavimenti per ambienti sottoposti a traffico particolarmente intenso  
Conformi ai requisiti della classe PEI V, alta resistenza  
Pavimentos para trânsito intenso  
Cumprem especificações PEI V, alta resistência  
Sol pour passage intense  
Conforme aux spécifications PEI V, haute résistance  
Floorings with intense traffic  
Compliant with PEI V specifications, high resistance  
Für sehr stark begangene Bodenbeläge  
Erfüllen die Spezifikationen PEI V, hohe  
Плитки для интенсивного движения  
Отвечают требованиям PEI V, высокая прочность  
用于通行量密集的地面  
符合 PEI V 规范, 高强度

Porcelánicos pulidos

# Propiedades antideslizantes

Proprietà antiscivolo | Propiedades antiderrapantes | Propriétés antidérapantes | Non-slip properties  
Rutschfestigkeit | Противоскользкие свойства | 防滑性能

Las propiedades antideslizantes de la cerámica fabricada por Roca se clasifican en función del ensayo que se utilice:

Método	Descripción
PÉNDULO (ENV 12633)	Simula un zapato que oscila sobre el azulejo.
RAMPA (DIN 55130 y 51097)	Sitúa a la persona sobre una plataforma de azulejos, dicha plataforma se va inclinando hasta resbalar.
ASTM C1028	Simula el deslizamiento por arrastre de una pesa sobre el azulejo.
TORTUS (ISO-10545/17A)	Se realiza con un aparato mecánico que se desplaza a velocidad constante.

Los métodos de ensayo no son equivalentes entre si, debido a las propias características del ensayo. No obstante, cuanto mayor sea el valor obtenido, más antideslizante será el producto.

Es muy importante seleccionar bien las propiedades antideslizantes del material en función del uso final.

The non-slip properties of Roca's ceramic tiles are classified according to the test used:

Method	Description
PENDULUM (ENV 12633)	Simulates a shoe swinging across the tile.
RAMP (DIN 55130 and 51097)	Places the person on a platform of tiles which tilts until the person slips.
ASTM C1028	Simulates the dragging of a weight over the tile.
TORTUS (ISO-10545/17A)	Performed with a mechanical apparatus which moves at a constant speed.

The diversity of test methods used means that the same diversity exists with regard to the recommended use, since the methods are not comparable between themselves, although it is true that the greater the value obtained, the greater the non-slip rating of the product.

It is very important to select the non-slip properties of the material in accordance with the intended use.

Le proprietà antiscivolo delle ceramiche prodotte da Roca si classificano in base al test impiegato:

Metodo	Descrizione
PENDOLO (ENV 12633)	Simulazione di una scarpa che oscilla sulla piastrella.
RAMPA (DIN 55130 e 51097)	Posizionamento di una persona su una piattaforma di piastrelle che si va inclinando fino a farla scivolare.
ASTM C1028	Simulazione di scivolamento per trascinarsi di un peso sulla piastrella.
TORTUS (ISO-10545/17A)	Effettuato tramite un apparecchio meccanico che si sposta a velocità costante.

Alla diversità dei metodi di prova impiegati corrisponde una diversità d'uso raccomandato del prodotto, in quanto i metodi non possono essere confrontati tra loro. Tuttavia, più alto è il valore ottenuto dal metodo di prova, più alta sarà la proprietà antiscivolo del prodotto.

È molto importante scegliere bene le proprietà antiscivolo del materiale in funzione dell'uso a cui il prodotto è destinato.

Die Rutschfestigkeit der von Roca hergestellten Keramik wird gemäß der angewandten Prüfmethode klassifiziert:

Methode	Beschreibung
PENDEL (ENV 12633)	Simuliert mithilfe eines Pendels die Bewegung eines Schuhs auf einer Fliese.
RAMPE (DIN 55130 und 51097)	Eine Person geht auf einer gefliesten Oberfläche, die so lange stärker geneigt wird, bis die Person abrutscht.
ASTM C1028	Simuliert einen auf der Fliese durch Ziehen gleitenden Körper.
TORTUS (ISO-10545/17A)	Erfolgt mittels eines mechanischen Geräts, das sich mit gleichbleibender Geschwindigkeit bewegt.

Die Vielseitigkeit der angewandten Prüfmethode führt zu ebenso vielseitigen Empfehlungen in Bezug auf die Verwendung, zumal die Methoden nicht miteinander vergleichbar sind. Allgemein gilt jedoch, dass je höher der ermittelte Wert, umso besser ist die Rutschfestigkeit des Produkts.

Es ist sehr wichtig, die Rutschfestigkeit des Materials in Bezug auf den Verwendungszweck auszuwählen.

As propriedades antiderrapantes da cerâmica fabricada pela Roca são classificadas em função do teste utilizado:

Método	Descrição
PÊNDULO (ENV 12633)	Simula um sapato que oscila sobre o azulejo.
RAMPA (DIN 55130 e 51097)	Coloca a pessoa sobre uma plataforma de azulejos e essa plataforma vai inclinando até resvalar.
ASTM C1028	Simula a derrapagem por arrasto de um peso sobre o azulejo.
TORTUS (ISO-10545/17A)	Realiza-se com um dispositivo mecânico que se desloca a uma velocidade constante.

A diversidade de métodos de teste utilizados faz com que exista essa mesma diversidade no que toca ao uso recomendado, uma vez que os métodos não são comparáveis entre si, embora seja certo que, quanto mais elevado o valor obtido, mais antiderrapante é o produto.

É muito importante efetuar uma boa seleção das propriedades antiderrapantes do material em função do uso final.

Противоскользкие свойства керамики производства «Роса» классифицируются в зависимости от используемых испытаний:

Метод	Описание
МАЯТНИК (ENV 12633)	Симулирует туфлю, качающуюся над плиткой.
СКАТ (DIN 55130 и 51097)	Ставят человека на платформу из плиток; платформа постепенно наклоняется, пока не появится скольжение.
ASTM C1028	Симулирует скольжение гири по плитке, как при волочении.
TORTUS (ISO-10545/17A)	Выполняется механическим аппаратом, который перемещается по плитке с постоянной скоростью.

Разнообразие используемых методов испытания приводят к такому же разнообразию в отношении рекомендуемого использования, так как эти методы не поддаются сравнению между собой, хотя и верно, что чем выше получаемое значение, тем менее скользким будет продукт.

Поэтому очень важно правильно выбрать противоскользкие свойства материала в зависимости от конечного использования.

Les propriétés antidérapantes du grès cérame de sol Roca sont classées selon la méthode d'essai utilisée :

Méthode	Description
PENDULE (ENV 12633)	Simulation d'une chaussure oscillant sur le carrelage.
RAMPE (DIN 55130 et 51097)	Une plateforme carrelée portant une personne s'incline jusqu'à ce que la personne glisse.
ASTM C1028	Simulation du glissement par traînage d'un poids sur un sol carrelé.
TORTUS (ISO-10545/17A)	Déplacement d'un appareil mécanique à vitesse constante.

La diversité des méthodes d'essai utilisée débouche sur une diversité comparable des usages recommandés, les méthodes n'étant pas comparables entre elles. On peut toutefois affirmer que plus la valeur obtenue est élevée, plus le produit est antidérapant.

Il convient de procéder à une sélection minutieuse des propriétés antidérapantes du matériau en fonction de l'usage prévu.

Roca 瓷砖的防滑性能是根据如下测试方法进行分类的：

方法	描述
摆测 (ENV 12633)	模拟鞋子在瓷砖上旋转。
斜坡测试 (DIN 55130 y 51097),	让一个人站到瓷砖制成的平台上，倾斜平台直到人滑倒。
美国材料与试验协会 C1028	模拟重物在瓷砖上拖动。
扭曲测试 (ISO-10545/17A)	用一种匀速运动的机械仪器进行测试。

虽然测试值越高说明产品的防滑性能越好，但测试方法的多样性意味着瓷砖的推荐用途具有相同的多样性，因为这些测试方法之间并不具有可比性。

根据既定用途来选择材料的防滑性能十分重要。

# Propiedades antideslizantes

# Grupos de utilización Roca

Gruppi di uso Roca | Grupos de utilização Roca | Groupes d'utilisation Roca | Roca use groups  
Anwendungsgruppen von Roca | Группы использования «Roca» | Roca 的应用等级

Antes de seleccionar el producto para una instalación se aconseja siempre verificar el grupo de pertenencia del mismo respecto a la aplicación que se vaya a dar.

Para facilitar esta tarea Roca ha elaborado unos grupos de utilización; es una clasificación orientativa y general, basada en la norma de Abrasión Superficial (ISO 10545-7), la escala Mohs (EN-101), la Resistencia Manchas (ISO 10545-14), la Resistencia Química (ISO 10545-13) y la norma de Abrasión Profunda (ISO 10545-6). Con esto los productos Roca están clasificados a modo de guía de ayuda. Dependiendo de las condiciones de uso, el profesional decidirá el producto adecuado en cada caso.

Grupo	Características
<b>I</b>	Para zonas de muy poco tránsito
<b>II</b>	Para zonas de poco tránsito
<b>III</b>	Para zonas de tránsito moderado
<b>IV</b>	Para zonas de mucho tránsito
<b>V</b>	Pavimentos para tránsito intenso Cumplen especificaciones PEI V, resistencia alta
<b>IV P</b>	Porcelánicos pulidos (p. 182)

La elección de productos antideslizantes se puede realizar a través del apartado 'Propiedades Antideslizantes'.

Roca recomienda el uso de las Fichas Técnicas del producto que se facilitan a través de nuestra red comercial o en nuestra página web ([www.rocatile.com](http://www.rocatile.com)), para un conocimiento mayor del producto y una elección más acertada.

Aunque la responsabilidad final de la elección de la cerámica Roca es del usuario y de la dirección de la obra, el equipo comercial y técnico de Roca está dispuesto asesorarle en la elección del producto cerámico.

Before selecting the product for an installation, it is recommended always to check the group to which it belongs with regard to its intended application.

To facilitate this task, Roca has drawn up a list of use groups, which is a general orientative classification based on the Surface Abrasion standard (ISO 10545-7), the Mohs scale (EN-101), Stain Resistance (ISO 10545-14), Chemical Resistance (ISO 10545-13), the Deep Abrasion standard (ISO 10545-6). In this way, Roca's products are classified for guidance. Depending on the conditions of use, the professional will decide on the most suitable product.

Group	Characteristics
<b>I</b>	For zones with very little traffic
<b>II</b>	For zones with little traffic
<b>III</b>	For zones with moderate traffic
<b>IV</b>	For zones with high traffic
<b>V</b>	Floorings with intense traffic Compliant with PEI V specifications, high resistance
<b>IV P</b>	Polished porcelain tiles (p. 184)

The choice of non-slip products can be made in accordance with the 'Non-Slip Properties' Section.

Roca recommends the use of the Product Specification Sheets available through our commercial network or on our website ([www.rocatile.com](http://www.rocatile.com)), in order to be more familiar with the product and make the most suitable choice.

Although the final responsibility of the choice of the Roca ceramic tile lies with the user and the works management, Roca's commercial and technical staff will be pleased to advise you on the choice of the ceramic product.

Prima di scegliere il prodotto per la posa si raccomanda di verificarne sempre il gruppo di appartenenza in base alla tipologia di applicazione.

Per facilitare questa operazione, Roca ha elaborato dei gruppi di uso. Si tratta di una classificazione di carattere orientativo e generale, basata sulle seguenti norme: Abrasione della superficie (ISO 10545-7), Scala Mohs (EN-101), Resistenza alle macchie (ISO 10545-14), Resistenza chimica (ISO 10545-13), Abrasione profonda (ISO 10545-6). In questo modo Roca classifica i suoi prodotti in una sorta di guida all'uso. In base alle condizioni d'uso, il professionista sceglierà il prodotto più idoneo alla sua applicazione.

Gruppo	Caratteristiche
<b>I</b>	Per ambienti sottoposti a traffico leggero
<b>II</b>	Per ambienti sottoposti a traffico medio
<b>III</b>	Per ambienti sottoposti a traffico medio forte
<b>IV</b>	Per ambienti sottoposti a traffico intenso
<b>V</b>	Pavimenti per ambienti sottoposti a traffico particolarmente intenso Conformi ai requisiti della classe PEI V, alta resistenza
<b>IV P</b>	Porcellanati levigati (p. 182)

È possibile scegliere tra i prodotti antiscivolo consultando il capitolo "Proprietà antiscivolo".

Roca raccomanda l'uso delle Schede Tecniche Prodotto disponibili tramite la nostra rete commerciale o la nostra pagina Web ([www.rocatile.com](http://www.rocatile.com)), per conoscere meglio i prodotti e fare una scelta più oculata.

Sebbene la responsabilità ultima della scelta della ceramica Roca è dell'utente e della direzione di cantiere, lo staff commerciale e tecnico Roca è disponibile a supportarla nella scelta della ceramica.

Vor der Auswahl eines Produktes empfehlen wir Ihnen, stets die Gruppenzugehörigkeit des Produktes in Bezug auf die Anwendung zu überprüfen.

Zur Erleichterung dieser Aufgabe hat Roca Anwendungsgruppen erarbeitet, die eine allgemeine und der Orientierung dienende Klassifizierung darstellen. Sie basieren auf der Norm für Oberflächenverschleiß (ISO 10545-7), der Mohs-Skala (EN-101), der Fleckenbeständigkeit (ISO 10545-14), der chemischen Beständigkeit (ISO 10545-13) und der Norm für Tiefenverschleiß (ISO 10545-6). Die Klassifizierung der Roca-Produkte soll Ihnen als Hilfsmittel dienen. Je nach Verwendungsart entscheidet der Fachmann für das geeignete Produkt.

Gruppe	Merkmale
<b>I</b>	Für sehr wenig begangene Bereiche
<b>II</b>	Für wenig begangene Bereiche
<b>III</b>	Für mittelstark begangene Bereiche
<b>IV</b>	Für stark begangene Bereiche
<b>V</b>	Für sehr stark begangene Bodenbeläge Erfüllen die Spezifikationen PEI V, hohe Widerstandsfähigkeit
<b>IV P</b>	Polierte Feinsteinzeugfliesen (p. 184)

Sie können rutschfeste Produkte entsprechend den Informationen im Abschnitt „Rutschfestigkeit“ wählen.

Für zusätzliche Informationen zum Produkt und für eine optimale Auswahl empfiehlt Roca das Hinzuziehen von Technischen Datenblättern der Produkte, die über unser Vertriebsnetz oder auf unserer Website ([www.rocatile.com](http://www.rocatile.com)) erhältlich sind.

Auch wenn die Verantwortung für die Wahl der Roca Keramik letztendlich beim Verbraucher und der Bauleitung liegt, stehen Ihnen unsere Verkaufs- und Technikabteilungen gerne beratend zur Seite.

Antes de seleccionar o produto para instalação, é sempre aconselhável verificar o grupo a que o mesmo pertence, de acordo com a aplicação que dele irá ser feita.

Para facilitar esta tarefa, a Roca elaborou grupos de utilização, uma classificação orientadora e generalista, com base na norma de Abrasão Superficial (ISO 10545-7), na escala Mohs (EN-101), na Resistência a Manchas (ISO 10545-14), na Resistência Química (ISO 10545-13) e na norma de Abrasão Profunda (ISO 10545-6). Com isto, os produtos Roca são classificados como guia de ajuda. Dependendo das condições de uso, o profissional decidirá qual o produto adequado.

Grupo	Características
<b>I</b>	Para zonas de muito pouco trânsito
<b>II</b>	Para zonas de pouco trânsito
<b>III</b>	Para zonas de trânsito moderado
<b>IV</b>	Para zonas de muito trânsito
<b>V</b>	Pavimentos para trânsito intenso Cumpram especificações PEI V, alta resistência
<b>IV P</b>	Produtos porcelânicos polidos (p. 183)

A seleção de produtos antiderrapantes pode ser efetuada através da secção 'propriedades antiderrapantes'.

A Roca recomenda o uso das Fichas Técnicas do produto facultadas através da nossa rede comercial ou da nossa página web ([www.rocatile.com](http://www.rocatile.com)), para melhor conhecimento do produto e uma seleção mais acertada.

Embora a responsabilidade final na seleção da cerâmica Roca seja do utilizador e da direção da obra, a equipa comercial e técnica da Roca está disposta a prestar auxílio nessa seleção.

Перед тем, как выбрать продукт для укладки, рекомендуется всегда проверить, к какой группе принадлежит данный продукт по своему использованию.

Чтобы облегчить эту задачу, «Roca» выработала серию групп использования; это ориентировочная и общая классификация, в основе которой лежат норма «Устойчивость к стиранию» (ISO 10545-7), шкала МОСа (Mohs) (EN-101), «Устойчивость к образованию пятен» (ISO 10545-14), «Химическая устойчивость» (ISO 10545-13) и норма «Устойчивость к глубинному истиранию» (ISO 10545-6). Таким образом, предлагается своеобразный путеводитель, классификация продуктов марки «Roca». В зависимости от условий использования, профессионал выберет подходящий продукт.

Группа	Характеристики
<b>I</b>	Для мест с очень небольшим движением
<b>II</b>	Для мест с небольшим движением
<b>III</b>	Для мест с умеренным движением
<b>IV</b>	Для мест с большим движением
<b>V</b>	Плитки для интенсивного движения Отвечают требованиям PEI V, высокая прочность
<b>IV P</b>	Шлифованный керамогранит (p. 185)

Выбор продуктов с противоскользящими свойствами может быть сделан с помощью раздела «Противоскользящие свойства».

«Roca» рекомендует пользоваться техническими описаниями продуктов, которые можно найти в нашей коммерческой сети или на нашем web-сайте ([www.rocatile.com](http://www.rocatile.com)), для того, чтобы лучше узнать конкретный продукт и сделать верный выбор.

Хотя конечная ответственность за выбор того или иного продукта «Roca» лежит на пользователе и на руководстве строительными работами, коммерческое и техническое подразделения компании «Roca» готовы помочь Вам в выборе керамических продуктов.

Avant de sélectionner un produit pour une installation donnée, il est recommandé de vérifier le groupe auquel il appartient au regard de l'application prévue.

Pour faciliter cette étape et à titre d'orientation, Roca a établi des groupes d'utilisation constituant un classement général, basé sur la norme d'Abrasion Superficielle (ISO 10545-7), l'échelle Mohs (EN-101), la résistance aux taches (ISO 10545-14), la résistance chimique (ISO 10545-13) et la norme d'abrasion profonde (ISO 10545-6). Les produits Roca sont ainsi classés à titre d'orientation. En fonction des conditions d'usage prévues, le professionnel peut se baser sur ce classement pour sélectionner le produit adapté.

Groupe	Caractéristiques
<b>I</b>	Zones très peu passantes
<b>II</b>	Zones peu passantes
<b>III</b>	Zones moyennement passantes
<b>IV</b>	Zones très passantes
<b>V</b>	Sol pour passage intense Conforme aux spécifications PEI V, haute résistance
<b>IV P</b>	Grès cérame polis (p. 183)

Le choix de produits antidérapants peut se baser sur la section « Propriétés antidérapantes ».

Pour une connaissance approfondie du produit et pour orienter un choix en connaissance de cause, Roca recommande la consultation des Fiches Techniques Produit, disponibles sur demande auprès de son réseau commercial ou sur le site Web ([www.rocatile.com](http://www.rocatile.com)).

L'équipe commerciale et technique Roca est à la disposition de la clientèle pour l'orienter dans le choix du grès cérame Roca, la responsabilité finale de ce choix relevant cependant du client et de la maîtrise d'oeuvre du chantier concerné.

在选择安装哪种产品之前，建议一定要根据既定用途检查一下该产品属于那个等级。

为此，Roca 公司制定了一系列指导性应用等级，其依据为表面磨损标准（ISO 10545-7）、莫氏硬度（EN-101）、耐污染性（ISO 10545-14）、耐化学腐蚀性（ISO 10545-13）及深度磨损标准（ISO 10545-6）。这样，Roca 产品实现了指导性分类，专业人员可以根据使用条件来选择最合适的产品。

等级	特性
<b>I</b>	用于通行量极少的区域
<b>II</b>	用于通行量较少的区域
<b>III</b>	用于通行量一般的区域
<b>IV</b>	用于通行量较高的区域
<b>V</b>	用于通行量密集的地面 符合 PEI V 规范，高强度
<b>IV P</b>	抛光瓷砖 (p. 185)

可根据“防滑性能”部分选择防滑产品。

Roca 建议使用公司商业网络或互联网（[www.rocatile.com](http://www.rocatile.com)）上提供的产品说明书进一步熟悉产品并作出最佳选择。

尽管选择哪种 Roca 瓷砖的最终决定权属于用户及施工管理方，但 Roca 公司的商务和技术人员还是非常乐于向您建议该选择哪种瓷砖产品。

# Recomendaciones de colocación

Raccomandazioni per la posa | Recomendações de aplicação | Recommendations de pose | Laying recommendations | Empfehlungen für die Verlegung | Рекомендации по укладке | 铺设建议

Una colocación adecuada y cuidadosa de los productos fabricados por Roca es vital para hacer resaltar al máximo las características técnicas de los mismos. Por este motivo, es necesario:

- 1- Verificar el calibre, tono y calidad del producto, antes de la colocación.
- 2- Escoger herramientas de instalación adecuadas (llana dentada, maza de goma blanda, ventosa y llana de goma para la aplicación de la junta).
- 3- Que la superficie sobre la cual vaya a instalarse el material esté nivelada, limpia y aislada de la humedad.
- 4- Prestar especial atención al tipo de adhesivo a utilizar (consultar con el proveedor habitual de adhesivos), dado que cada tipo de cerámica requiere el adhesivo adecuado. (Norma de referencia: EN-1348).
- 5- El profesional responsable de la colocación del material, debe elegir adecuadamente las juntas entre piezas, así como las juntas perimetrales, de manera que se garantice una correcta absorción de movimientos estructurales, y una compensación de tolerancias dimensionales del producto. Roca Cerámica recomienda colocar la cerámica con una junta mínima de 1mm y comprobar si en la caja hay otras indicaciones (medidas entre calibres o junta recomendada).
- 6- No se debe utilizar junta de color que contenga negro de humo (carbón micronizado), ni tintes que pueden dificultar la limpieza de la superficie revestida.
- 7- Limpiar los restos de rejuntado de la superficie de las baldosas cuando aún están frescos, utilizando una esponja con agua limpia; en ningún caso deben utilizarse materiales que presenten alta dureza y puedan rayar el producto cerámico tales como espátulas metálicas o estropajos abrasivos. Siempre se deben seguir las recomendaciones indicadas por el fabricante de adhesivos.
- 8- Una vez colocado el azulejo, hay que evitar las operaciones en la zona alicatada (enyesado, pintura, colocación andamios/escaleras, proyección de restos metálicos de radiales, traseigo de herramientas, arrastre de objetos pesados, resto de materiales abrasivos de obra, etc.), en caso contrario, siempre hay que proteger las baldosas y las juntas para evitar posteriores problemas de limpieza o deterioro.

## Especial para mosaicos:

Para conseguir el efecto mosaico, las piezas deben colocarse sin separación entre sí y deben rejuntarse en su totalidad. La colocación de los mosaicos Roca es sencilla y rápida, al no precisar crucetas.

**Paso 1:** Colocar las piezas sin separación.

**Paso 2:** Rejuntar toda la superficie de las piezas y limpiar el material sobrante.

El acabado exclusivo de los mosaicos, garantiza la perfecta absorción del rejuntado, no necesitando materiales especiales.

## Especial para Skintech:

SKINTECH permite su colocación sobre diversos soportes tales como enfoscados, yeso, cartón-yeso, cerámica, mármol, piedra, terracota, etc.

El soporte debe estar limpio, seco y ser resistente.

La superficie de colocación debe ser plana. Se deberán rellenar los huecos y desniveles antes de su colocación.

Utilizar cemento-cola con clasificación C2 según EN-12004, compatible con la superficie a revestir o pavimentar.

Aplicar el cemento-cola con encolado doble, sobre la pieza y sobre el soporte.

Golpear suavemente con herramienta de goma asegurando que no quedan espacios de aire entre el soporte, el adhesivo y la pieza.

Las juntas entre piezas deberán ser como mínimo de 1mm. También se deberán respetar las juntas de dilatación establecidas por la dirección facultativa de la obra.

SKINTECH se puede cortar y perforar con herramientas para gres porcelánico. Se recomienda su manipulación sobre un plano de trabajo plano y limpio.

Para perforar la pieza, es recomendable comenzar con velocidad de rotación reducida sin ejercer excesiva presión. No utilizar el percutor de la máquina.

## Especial para las series Messina, Lucania y White Toronto:

La instalación de las baldosas se efectuará con capa fina utilizando adhesivo cementoso de la clase C1 sobre superficies planas y regulares.

## Especial Colocación de Peldaños:

El soporte estructural debe estar totalmente limpio y enrasado en superficie.

Empezar la colocación desde arriba hacia abajo.

Es imprescindible no dejar zonas sin cemento cola.

Macizar completamente el hueco entre la pared y el borde interior del peldaño.

Colocar siempre la tabica (contra-huella) al mismo nivel que el peldaño.

Se recomienda la protección del peldaño durante la obra.

Se deben evitar golpes directos a los peldaños durante la obra y una vez instalados.

Una posa idonea e attenta della ceramica prodotta da Roca è di enorme importanza per esaltarne al massimo le caratteristiche tecniche. Per tale ragione, è necessario:

- 1- Verificare il calibro, il tono e la qualità del prodotto prima della posa.
- 2- Scegliere gli attrezzi di posa adeguati (cazzuola dentata, martello di gomma bianca, ventosa e raschietto di gomma per l'applicazione dei giunti).
- 3- Verificare che la superficie di posa del materiale sia livellata, pulita e isolata dall'umidità.
- 4- Prestare particolare attenzione al tipo di adesivo da usare (consultare il fornitore di adesivi abituale), considerando che ciascun tipo di ceramica richiede un adesivo adeguato. (Norma di riferimento: EN-1348).
- 5- Il professionista responsabile della posa del materiale deve scegliere adeguatamente i giunti tra i pezzi nonché i giunti perimetrali, in modo da garantire un corretto assorbimento dei movimenti strutturali e una compensazione delle tolleranze dimensionali del prodotto. Roca Ceramica raccomanda di posare la ceramica con un giunto minimo di 1 mm e verificare se nella confezione sono presenti altre indicazioni (misure tra i calibri, giunto raccomandato).
- 6- Non usare giunti colorati che contengano nerofumo (carbone micronizzato), né tinte che possono rendere difficile la pulizia della superficie rivestita.
- 7- Pulire i resti di stuccatura delle piastrelle quando sono ancora freschi, usando una spugna con acqua pulita; non usare in nessun caso materiali caratterizzati da un'elevata durezza e che possano graffiare il prodotto ceramico come, ad esempio, spatole metalliche o spugnette abrasive. Seguire sempre le raccomandazioni fornite dal produttore degli adesivi.
- 8- Una volta posata la piastrella, bisogna evitare qualsiasi operazione sulla zona piastrellata (gessatura, verniciatura, posizionamento di impalcature/scale, proiezione di resti metallici delle smerigliatrici angolari, trasferimento di attrezzi, trascinamento di oggetti pesanti, resti di materiali abrasivi, ecc.). In ogni caso, bisogna sempre proteggere le piastrelle e i giunti per evitare problemi successivi di pulizia o di danneggiamento.

## Speciale per mosaici:

Per ottenere l'effetto mosaico, i pezzi devono essere posati senza separarli tra loro e devono essere stuccati nella loro totalità. La posa dei mosaici Roca è facile e veloce, in quanto non necessita l'uso di crocette.

**Passo 1:** Posare i pezzi senza separarli.

**Passo 2:** Stuccare tutta la superficie dei pezzi e pulire rimuovendo il materiale in eccedenza.

La finitura esclusiva dei mosaici garantisce il perfetto assorbimento della stuccatura, in quanto non necessita di materiali speciali.

## Speciale per Skintech:

SKINTECH può essere posato su diversi tipi di supporto: rinzafo, gesso, cartongesso, ceramica, marmo, pietra, terracotta, ecc.

Il supporto deve essere pulito, asciutto e resistente.

La superficie di posa deve essere piana. Prima della posa chiudere eventuali cave ed eliminare i dislivelli.

Usare un adesivo cementizio di classe C2 conforme alla norma EN-12004, compatibile con la superficie da rivestire o pavimentare.

Applicare l'adesivo cementizio con doppio incollaggio sul pezzo e sul supporto.

Agire con dei colpi leggeri usando un attrezzo di gomma, assicurandosi che non rimangano spazi d'aria tra il supporto, l'adesivo e il pezzo.

I giunti tra i pezzi dovranno essere di minimo 1 mm. Inoltre, si dovranno rispettare i giunti di dilatazione stabiliti dalla direzione tecnica di cantiere.

SKINTECH si può tagliare e forare con attrezzi per il gres porcellanato. Manipolare su un piano di lavoro piano e pulito.

Per forare il pezzo, si consiglia di iniziare con una velocità di rotazione ridotta, evitando di esercitare eccessiva pressione. Non usare il percussore della macchina.

## Speciale per le serie Messina, Lucania e White Toronto:

La posa delle piastrelle si effettuerà con uno strato fine usando un adesivo cementizio di classe C1 su superfici piane e regolari.

## Posa speciale di gradini:

Il supporto strutturale deve essere completamente pulito e livellato in superficie.

Iniziare la posa dall'alto verso il basso.

È imprescindibile non lasciare zone prive di adesivo cementizio.

Chiudere completamente la cava tra la parete e il bordo interno del gradino.

Posare sempre l'alzata allo stesso livello del gradino.

Si raccomanda di proteggere il gradino durante i lavori.

Evitare di applicare colpi diretti sui gradini durante i lavori e una volta posati.

A aplicação adequada e cuidadosa dos produtos cerâmicos fabricados pela Roca é vital para realçar ao máximo as características técnicas dos mesmos. Por esse motivo, é necessário:

- 1- Verificar o calibre, o tom e a qualidade do produto antes da aplicação.
- 2- Escolher ferramentas de aplicação adequadas (plaina dentada, massa de borracha branca, ventosa e plaina de borracha para a aplicação da junta).
- 3- Que a superfície sobre a qual o material irá ser instalado esteja nivelada, limpa e afastada da humidade.
- 4- Prestar especial atenção ao tipo de adesivo a utilizar (consultar o fornecedor habitual de adesivos), dado que cada tipo de cerâmica requer um adesivo adequado. (Norma de referência: EN-1348).
- 5- O profissional responsável pela aplicação do material deve escolher adequadamente as juntas entre peças, bem como as juntas perimetrais, de maneira a garantir a correcta absorção de movimentos estruturais e uma compensação das tolerâncias dimensionais do produto. A Roca Cerâmica recomenda aplicar a cerâmica com uma junta de 1 mm no mínimo e confirmar se na caixa existem outras indicações (medidas entre calibres, junta recomendada).
- 6- Não deve ser utilizada junta de cor que contenha negro de fumo (carvão micronizado), nem tintas que possam dificultar a limpeza da superfície revestida.
- 7- Limpar os restos de rejuntamento da superfície das tijoleiras quando ainda estejam frescos, utilizando uma esponja com água limpa; em caso algum deverão ser utilizados materiais que apresentem dureza elevada e possam riscar o produto cerâmico, tais como espátulas metálicas ou esfregões abrasivos. Seguir sempre as recomendações do fabricante de adesivos.
- 8- Uma vez colocado o azulejo, há que evitar operações na área azulejada (engessadura, pintura, colocação de andaimes/escadas, projeção de restos metálicos de radiais, tráfego de ferramentas, arrastamento de objetos pesados, restos de materiais abrasivos da obra, etc.). Caso contrário, será sempre preciso proteger as tijoleiras e as juntas para evitar posteriores problemas de limpeza ou deterioração.

#### **Especial para mosaicos:**

Para conseguir o efeito mosaico, as peças devem ser aplicadas sem separação entre si e devem ser rejuntadas na totalidade. A aplicação dos mosaicos Roca é simples e rápida, pois não precisa de cruzetas.

**Passo 1:** Colocar as peças sem separação.

**Passo 2:** Rejuntar toda a superfície das peças e limpar o material excedente.

O acabamento exclusivo dos mosaicos garante a absorção perfeita do rejuntamento, não sendo necessários materiais especiais.

#### **Especial para Skintech:**

SKINTECH é aplicável sobre diversos suportes, tais como enfoscados, gesso, cartão-gesso, cerâmica, mármore, pedra, terracota, etc.

O suporte deve estar limpo, seco e ser resistente.

A superfície de aplicação deve ser plana. Todos os buracos e desníveis deverão ser preenchidos antes da aplicação.

Utilizar cimento-cola com classificação c2, segundo a norma en-12004, compatível com a superfície a revestir ou a pavimentar.

Aplicar o cimento-cola com colagem dupla, sobre a peça e sobre o suporte.

Golpear suavemente com uma ferramenta de borracha, certificando-se que não ficam bolsas de ar entre o suporte, o adesivo e a peça.

As juntas entre as peças deverão ter, no mínimo, 1 mm. Devem também ser respeitadas as juntas de dilatação estabelecidas pela direcção facultativa da obra.

SKINTECH pode submeter-se a corte e perfuração com ferramentas para grés porcelânico. É recomendável a manipulação do produto sobre um local de trabalho plano e limpo.

Para perfurar a peça, é recomendável começar com uma velocidade de rotação reduzida, sem exercer pressão em excesso. Não utilizar o percutor da máquina.

#### **Especial para as séries Messina, Lucania e White Toronto:**

A instalação das tijoleiras deverá ser efetuada com capa fina, utilizando adesivo cimentoso da classe C1 sobre superfícies planas e regulares.

#### **Especial Aplicação de Degraus:**

O suporte estrutural deve estar totalmente limpo e nivelado na superfície.

Iniciar a aplicação de cima para baixo.

É imprescindível não deixar zonas sem cimento-cola.

Encher completamente a abertura entre a parede e a borda interior do degrau.

Colocar sempre a tabica (espelho) ao mesmo nível do degrau.

É recomendável a proteção do degrau durante a obra.

É de evitar pancadas diretas nos degraus durante a obra e uma vez instalados.

Une pose soignée et techniquement parfaite du carrelage en grès cérame Roca est essentielle pour jouir des caractéristiques techniques des sols. Il convient pour cela de :

- 1- Vérifier le calibre, le ton et la qualité du produit, avant la pose.
- 2- Sélectionner un outillage de pose adapté (taloche dentée, maillet en caoutchouc blanc, ventouse et taloche caoutchouc à jointoyer).
- 3- S'assurer que la surface de pose est nivelée, propre et protégée contre toute humidité.
- 4- Prêter une attention particulière au type d'adhésif à utiliser (consultar le fournisseur habituel d'adhésifs), car chaque type de grès cérame requiert un adhésif adapté (Norme applicable : EN-1348).
- 5- Apporter une attention particulière aux joints intermédiaires et périmétraux afin de garantir une absorption des mouvements structurels et une compensation des tolérances dimensionnelles du produit. Roca Ceramica recommande de prévoir un joint de 1 mm au moins et de vérifier si d'autres indications (mesures entre jauges, joint recommandé) figurent sur l'emballage.
- 6- Ne pas utiliser de joint coloré contenant du noir de fumée (charbon micronisé), ni d'encres susceptibles d'accroître les difficultés de nettoyage de la surface revêtue.
- 7- Nettoyer les restes de joints de la surface du carrelage sans laisser sécher, à l'aide d'une éponge et à l'eau claire. N'utiliser en aucun cas d'ustensiles durs pouvant rayer le carrelage tels que des spatules ou des éponges métalliques. Respecter les indications fournies par le fabricant de l'adhésif.
- 8- Après la pose, éviter tous travaux dans la zone carrelée (plâtres, peinture, montage d'échafaudage/escaliers, projection de restes métalliques, déplacement d'outillage, restes de matériaux abrasifs de chantiers, traînage d'objets lourds, etc.). Si de telles opérations ont lieu, protéger la zone carrelée et les joints afin d'éviter des problèmes de nettoyage ou d'usure prématurée.

#### **Spécial mosaïque :**

Pour obtenir un effet de mosaïque, les carreaux doivent être posés bord à bord puis jointoyés sur toute la surface. Ne requérant pas de croisillon, la pose de la mosaïque Roca est simple et rapide.

**Étape 1 :** Placer les carreaux bord à bord.

**Étape 2 :** Jointoyer toute la surface des carreaux et nettoyer.

La finition exclusive de la mosaïque assure une absorption parfaite du jointement, aucun matériau spécial n'étant nécessaire.

#### **Spécial Skintech :**

SKINTECH peut être posé sur une multitude de supports : murs enduits, plâtre, carton-plâtre, grès cérame, marbre, pierre, terre cuite, etc.

Le support doit être parfaitement net, sec et résistant.

La surface doit être plane. Il convient de combler toute inégalité de surface avant la pose.

Utiliser du ciment-colle classe C2 selon EN-12004, compatible avec le support choisi. Appliquer le ciment-colle sur la pièce à poser et sur le support.

Poser la pièce puis, à l'aide d'une spatule en caoutchouc, tapoter doucement pour éliminer les éventuelles bulles d'air emprisonnées entre la pièce et le support.

Prévoir des joints entre pièces d'au moins 1 mm. Respecter les joints de dilatation prévus par le bureau technique.

Skintech peut être coupé et perforé à l'aide d'outils pour le grès cérame porcelainé. À manipuler sur un plan de travail plan et propre.

Pour perforer une pièce, il est conseillé de commencer à vitesse réduite et d'exercer une pression limitée. Ne pas utiliser le percuteur de la perceuse.

#### **Spécial pour les séries Messina, Lucania et White Toronto :**

La pose du carrelage est réalisée sur une couche fine de ciment-colle classe C1 appliqué sur une surface plane et régulière.

#### **Spécial pose de marches :**

Le support structurel doit être totalement propre et plan.

La pose se déroule de haut en bas.

Toute la surface doit être couverte de ciment-colle.

Comblent complètement le creux entre le mur et le bord intérieur de la marche.

Poser la contremarche au même niveau que la marche.

La marche doit être protégée pendant la durée des travaux.

Éviter les coups directs sur les marches, au cours des travaux et après la pose.

# Recomendaciones de colocación

Raccomandazioni per la posa | Recomendações de aplicação | Recommendations de pose | Laying recommendations | Empfehlungen für die Verlegung | Рекомендации по укладке | 铺设建议

Correct, careful laying of Roca's ceramic products is vital for taking full advantage of their technical characteristics. For this reason, the following points are necessary:

- 1- Check the calibre, tone and quality of the product before laying.
- 2- Choose appropriate installation tools (toothed trowel, white rubber hammer, suction grip and rubber trowel for pointing).
- 3- Ensure that the surface on which the material is to be laid is level, clean and insulated from damp.
- 4- Pay special attention to the type of adhesive to be used (consult the habitual adhesive supplier), since each type of ceramic requires the appropriate adhesive. (Standard of reference: EN-1348).
- 5- The professional responsible for laying the material must choose the appropriate joints between pieces and the perimeter joints, in order to guarantee correct absorption of structural movements, and an allowance for dimensional tolerances of the product. Roca Cerámica recommends laying the tiles with a minimum joint of 1 mm and checking for other indications given on the box (measurements between calibres, recommended joint).
- 6- Do not use coloured pointing material containing black smoke (micronised carbon) or dyes which can hamper the cleaning of the tiled surface.
- 7- Clean off excess pointing material from the surface of the tiles when it is still fresh, using a sponge and clean water; never use hard materials that could scratch the tiles, such as metal spatulas or abrasive scourers. Always follow the recommendations given by the adhesive manufacturer.
- 8- Once the tiles are laid, avoid working in the tiled zone (plastering, painting, placing scaffolds/ladders, projecting metallic fragments from disc grinders, moving tools, dragging heavy objects, moving remains of abrasive building materials, etc.) If this cannot be avoided, always protect the tiles and joints to prevent problems of cleaning or deterioration.

## Special for mosaics:

To achieve the mosaic effect, the pieces must be laid without separations between them and must be completely pointed. Roca mosaics are quick and easy to lay as they do not require crosspieces.

**Step 1:** Lay the pieces without separation.

**Step 2:** Point all the surface of the pieces and clean off excess material.

The exclusive finish of the mosaics guarantees perfect absorption of the pointing material, no special materials being required.

## Special for Skintech:

SKINTECH can be laid on a variety of supports, such as rough and smooth plaster, plasterboard, tiles, marble, stone, terracotta, etc.

The support must be clean, dry and solid.

The laying surface must be flat. Hollows and height differences must be filled before laying.

Use cement glue with EN-12004 C2 classification, compatible with the surface to be covered or paved.

Apply the cement glue on both surfaces, the piece and the support.

Tap gently with a rubber tool to ensure that no air bubbles remain between the support, the glue and the piece.

The joints between pieces must be at least 1 mm wide. The expansion joints stipulated by the works management must also be respected.

SKINTECH can be cut and drilled with tools for working ceramic tiles. We recommend handling it on a flat, clean working surface.

To drill the piece, we recommend starting with a low rotation speed without exerting excessive pressure. Do not use the drill's percussion function.

## Special for the Messina, Lucania and White Toronto series:

Lay the tiles on a flat, even surface with a thin layer of class C1 cement glue.

## Special for laying steps:

The substrate must be perfectly clean and smooth.

Begin laying from the top downwards.

Do not leave any zones without cement glue.

Fill completely the gap between the wall and the lower edge of the step.

Always place the riser at the same level as the step.

It is recommended to protect the step surfaces while working.

Avoid direct blows to the steps both during and after installation.

Eine korrekte und sorgfältige Verlegung der Keramikfliesen von Roca ist für eine maximale Entfaltung der technischen Eigenschaften unabdingbar. Aus diesem Grund ist Folgendes notwendig:

- 1- Überprüfen Sie Größe, Ton und Eigenschaften des Produktes vor der Verlegung.
- 2- Wählen Sie für die Verlegung geeignete Werkzeuge (Zahnpachtel, weißer Gummihammer, Sauger und Gummispachtel zum Verfugen).
- 3- Überprüfen Sie, dass die Verlegefläche eben, sauber und gegen Feuchtigkeit isoliert ist.
- 4- Seien Sie bei der Wahl des zu verwendenden Klebers besonders sorgfältig und lassen Sie sich von Ihrem üblichen Lieferanten beraten, denn jedes Keramikmaterial benötigt einen entsprechenden Kleber (Referenznorm: EN-1348).
- 5- Der für die Verlegung zuständige Fachmann muss die Fugen zwischen den Fliesen und die Umfängsfugen so wählen, dass Bewegungen in der Struktur absorbiert und die Größtoleranz ausgeglichen werden. Roca Cerámica empfiehlt, die Fliesen mit einer Fuge von mindestens 1 mm zu verlegen und auf zusätzliche Angaben auf der Verpackung zu achten (unterschiedliche Kaliber, empfohlene Fuge).
- 6- Farbige Fugen, die Rußschwarz (Feinstkohle) enthalten oder Färbungen, die die Reinhaltung der gefliesten Oberfläche erschweren, dürfen nicht verwendet werden.
- 7- Entfernen Sie vor dem Erhärten der Fugenmasse die nach der Verlegung auf der Oberfläche der Fliesen zurückbleibenden Rückstände mit einem Schwamm und sauberem Wasser. Es dürfen auf keinen Fall Materialien verwendet werden, die extrem hart sind und das Keramikprodukt zerkratzen können, wie z.B. Metallspachteln oder Scheuerbürsten. Beachten Sie stets die Hinweise des Klebmittelherstellers.
- 8- Vermeiden Sie nach der Fliesenverlegung Arbeiten im betroffenen Bereich (Gipsen, Malen, Aufstellen von Gerüsten/Leitern, Schleifarbeiten, Umhertragen von Werkzeugen, Ziehen von schweren Objekten, Arbeiten mit scheuernden Materialrückständen usw.) Falls solche Arbeiten durchzuführen sind, müssen Fliesen und Fugen geschützt werden, um Probleme bei der Reinigung oder eine Beschädigung zu verhindern.

## Speziell für Mosaik:

Um den Mosaik Effekt zu erzielen, müssen die Teile ohne Zwischenraum verlegt und in ihrer Gesamtheit verfugt werden. Die Mosaik von Roca können leicht und schnell verlegt werden, da sie keine Fugenkreuze benötigen.

**Schritt 1:** Die Teile ohne Zwischenraum verlegen.

**Schritt 2:** Die gesamte verlegte Oberfläche verfugen und Rückstände entfernen.

Die einzigartige Bearbeitung der Mosaik gewährleistet eine perfekte Aufnahme der Fugenmasse, ohne Zuhilfenahme von speziellen Werkzeugen.

## Speziell für Skintech:

SKINTECH kann auf verschiedenen Oberflächen verlegt werden, wie z. B. Putz, Gips, Gipskarton, Keramik, Marmor, Stein, Terrakotta usw.

Die Oberfläche muss sauber, trocken und widerstandsfähig sein.

Die Verlegefläche muss eben sein. Vor dem Anbringen müssen Löcher gefüllt und Unebenheiten beseitigt werden.

Verwenden Sie Zementkleber der Klassifizierung C2 gemäß EN-12004, der mit der zu verklebenden oder zu fliesenden Oberfläche kompatibel ist.

Tragen Sie den Zementkleber beidseitig, d. h. sowohl auf der Fliese als auch auf der Oberfläche, auf.

Klopfen Sie leicht mit einem Gummispattel auf die Fliese, um sicherzugehen, dass sich zwischen der Oberfläche, dem Kleber und der Fliese keine Luftzwischenräume befinden.

Die Fugen zwischen den Fliesen müssen mindestens 1 mm betragen. Auch müssen die von der Bauleitung festgelegten Dehnungsfugen eingehalten werden.

SKINTECH kann mit Werkzeug für Feinsteinzeug geschnitten und gebohrt werden. Die Bearbeitung sollte auf einer ebenen und sauberen Arbeitsfläche stattfinden.

Um die Fliese zu bohren, beginnen Sie zunächst mit einer verringerten Drehgeschwindigkeit, ohne dabei zu viel Druck auszuüben. Verwenden Sie nicht den Schlagbolzen der Maschine.

## Speziell für die Serien Messina, Luciana und White Toronto:

Die Fliesenverlegung erfolgt im Dünnbettverfahren mittels eines Zementklebers der Klassifizierung C1 auf ebenen und gleichmäßigen Oberflächen.

## Speziell für die Verlegung von Trittstufen:

Die strukturierte Oberfläche muss vollkommen sauber und eben sein.

Verlegen Sie von oben nach unten.

Stellen Sie sicher, den Zementkleber lückenlos aufzubringen.

Füllen Sie die Lücke zwischen Wand und Innenkante der Trittstufe vollständig aus.

Die Setzstufe (Stufenhöhe) immer auf der gleichen Höhe wie die Trittstufe anbringen.

Der Schutz der Stufen während der Verlegung wird empfohlen.

Vermeiden Sie während der Verlegearbeiten und nach dem Verlegen direkte Stöße auf die Trittstufen.

Правильная и аккуратная укладка керамики «Rosa» жизненно важна для того, чтобы максимально подчеркнуть её технические характеристики. Поэтому необходимо:

- 1- Проверить калибр, тон и качество продукта перед его укладкой.
- 2- Выбрать подходящие инструменты для укладки (зубчатый мастерок, молоток из белой резины, присоска и резиновый мастерок для нанесения затирки).
- 3- Поверхность, на которую будет укладываться материал, должна быть нивелированной, чистой и изолированной от влажности.
- 4- Обратите особое внимание на тип клеящего средства (проконсультируйтесь у своего обычного поставщика клеящих средств), так как каждый тип керамики требует соответствующего клеящего средства. (Ссылка на норму: EN-1348).
- 5- Профессионал, ответственный за укладку материала, должен правильно выбрать швы между плитками, а также периметральные швы, чтобы обеспечить правильное поглощение структурных движений и компенсировать размерную способность продукта. «Rosa Cerámica» рекомендует укладывать керамику с минимальным швом в 1 мм и проверять, нет ли в упаковке других указаний (размеров между калибрами, рекомендуемого шва).
- 6- Не следует использовать шов, содержащий чёрный цвет дыма (микронизированный уголь), ни красителей, которые могли бы усложнить уборку облицованной поверхности.
- 7- Удалите остатки раствора для заделывания швов пока он ещё свежий с поверхности плиток, используя губку с чистой водой; ни в коем случае не пользуйтесь твёрдыми материалами, которые могли бы поцарапать плитку, как, например, металлические шпатели или абразивные мочалки. Всегда следуйте рекомендациям и указаниям производителя клеящих средств.
- 8- После того, как плитка уложена, в месте, покрытом плиткой, нужно избежать различных операций (оштукатуривание, окрашивание, установка лесов/лестниц, отсаживание металлических фрагментов при использовании радиальных пил, перемещение инструментов, волочение тяжёлых предметов или остатков абразивных строительных материалов и т.д.). Если это невозможно, то надо защитить плитку и швы, чтобы избежать загрязнения или повреждения покрытия.

#### Специально для мозаики:

Чтобы добиться эффекта мозаики, плитки нужно укладывать так, чтобы между ними не было промежутков, раствор наносится сразу по всей поверхности. Укладывать мозаичную плитку «Rosa» просто и быстро, так как для этого не нужны крестовины.

**Шаг 1:** Установите плитки без промежутков.

**Шаг 2:** Нанесите раствор на всю поверхность плиток и удалите излишки материала.

Особенная поверхность мозаичной плитки гарантирует полное впитывание раствора, поэтому нет необходимости в использовании специальных материалов.

#### Специально для Skintech:

SKINTECH можно укладывать на различные основы, такие как: шпаклёвка, гипс, гипсокартон, керамика, мрамор, камень, терракота и т.д.

Поверхность должна быть чистой, сухой и прочной.

Основа должна быть ровной. Перед укладкой необходимо заполнить все полости и устранить все неровности.

Используйте цементный клей класса C2 согласно EN-12004, подходящий для поверхности, на которую будут наклеиваться плитки.

Нанесите цементный клей на плитку и на поверхность основы.

Слегка постучите резиновым инструментом, чтобы между основой, клеем и плиткой не осталось воздуха.

Швы между плитками должны быть не менее 1 мм. Также нужно учитывать расширительные швы, устанавливаемые техниками, ответственными за технадзор.

SKINTECH можно разрезать и просверлить инструментами для фарфоровой керамики. Работы рекомендуется выполнять на ровной и чистой рабочей поверхности.

Для сверления отверстий в плитке рекомендуется начать с низкой скорости вращения и не оказывать излишнего давления. Не используйте перфоратор.

#### Специально для серий «Messina», «Lucania» и «White Toronto»:

Плитки укладываются, нанося тонким слоем цементный клей класса C1 на плоские и ровные поверхности.

#### Специально об Укладке Ступеней:

Структурная основа должна быть полностью чистой и нивелированной.

Начинать укладку следует сверху вниз.

Очень важно не оставлять участков без цементного клея.

Полностью заполните свободное пространство между стеной и внутренним краем ступени.

Всегда укладывайте планку (подступенок) на одном и том же уровне, что и ступень.

Рекомендуется защищать ступень во время работ по их укладке.

Следует избегать прямых ударов по ступеням во время работы и после того, как они будут уложены.

Правильная, тщательная укладка керамики «Rosa» жизненно важна для того, чтобы максимально подчеркнуть её технические характеристики. Поэтому, чтобы максимально подчеркнуть её технические характеристики, необходимо:

- 1- Проверить калибр, тон и качество продукта перед его укладкой.
- 2- Выбрать правильные инструменты (зубчатый мастерок, молоток из белой резины, присоска и резиновый мастерок для нанесения затирки).
- 3- Проверить поверхность, на которую будет укладываться материал, должна быть нивелированной, чистой и изолированной от влажности.
- 4- Обратите особое внимание на тип клеящего средства (проконсультируйтесь у своего обычного поставщика клеящих средств), так как каждый тип керамики требует соответствующего клеящего средства. (Ссылка на норму: EN-1348).
- 5- Профессионал, ответственный за укладку материала, должен правильно выбрать швы между плитками, а также периметральные швы, чтобы обеспечить правильное поглощение структурных движений и компенсировать размерную способность продукта. «Rosa Cerámica» рекомендует укладывать керамику с минимальным швом в 1 мм и проверять, нет ли в упаковке других указаний (размеров между калибрами, рекомендуемого шва).
- 6- Не следует использовать шов, содержащий чёрный цвет дыма (микронизированный уголь), ни красителей, которые могли бы усложнить уборку облицованной поверхности.
- 7- Удалите остатки раствора для заделывания швов пока он ещё свежий с поверхности плиток, используя губку с чистой водой; ни в коем случае не пользуйтесь твёрдыми материалами, которые могли бы поцарапать плитку, как, например, металлические шпатели или абразивные мочалки. Всегда следуйте рекомендациям и указаниям производителя клеящих средств.
- 8- После того, как плитка уложена, в месте, покрытом плиткой, нужно избежать различных операций (оштукатуривание, окрашивание, установка лесов/лестниц, отсаживание металлических фрагментов при использовании радиальных пил, перемещение инструментов, волочение тяжёлых предметов или остатков абразивных строительных материалов и т.д.). Если это невозможно, то надо защитить плитку и швы, чтобы избежать загрязнения или повреждения покрытия.

#### Специально для мозаики:

Рекомендуется защищать ступень во время работ по их укладке.

Следует избегать прямых ударов по ступеням во время работы и после того, как они будут уложены.

# Mantenimiento

Manutenzione | Manutenção | Maintenance | Entretien | Instandhaltung | Уход | 保养

Para mantener la belleza y elegancia de la cerámica Roca, se aconseja la limpieza periódica del material, con sistemas convencionales.

Para la eliminación de restos de polvo y sólidos: por barrido o aspiración.

Se recomienda no utilizar mopas atrapa polvo con siliconas y ceras.

El lavado de la superficie se debe realizar con jabón neutro y la cantidad de agua caliente recomendada por el fabricante.

No se deben usar productos de limpieza abrillantadores, cerosos o con aditivos similares ya que con el paso del tiempo pueden dejar una capa impermeabilizante sobre la cerámica que altera el aspecto superficial de la misma.

Es recomendable la colocación de felpudos, que deberán permanecer limpios, en las entradas a los lugares pavimentados, ya sea desde la calle, terrazas o jardines, para evitar la entrada de elementos abrasivos. Se recomienda especial cuidado en zonas cercanas a playas u obras que pueden aportar arenas y piedras.

Es aconsejable poner protecciones a los objetos que por arrastre pudieran marcar el producto (patas metálicas de mesas, sillas, etc.), teniendo especial rigurosidad con productos brillantes y satinados.

Si la suciedad no se elimina completamente, facilitamos la siguiente tabla, donde se encuentran los agentes limpiadores adecuados para cada tipo de suciedad:

Tipo de mancha	Agente de limpieza
Aceite, Tinta, Rotulador, Tomate, Frutas, Chocolate, Grasa	Disolvente orgánico: alcohol, aguarrás o acetona Detergente alcalino ya sea en líquido o en polvo Bicarbonato
Alquitrán, Caucho, Betún, Pintura, Graffiti, Cera, Resinas, Rotulador, Esmalte de uñas	Disolvente orgánico: alcohol, aguarrás o acetona
Café, Helado, Nicotina, Vino	Detergente alcalino ya sea en líquido o en polvo
Cal, Cemento, Cerveza, Depósitos metálicos, Refrescos, Zumos	Ácidos diluidos: vinagre, sulfumán o ácido clorhídrico
Cola, Goma de mascar, Goma de neumático o zapato	Disolvente orgánico: alcohol, aguarrás o acetona Ácidos diluidos: sulfumán o ácido clorhídrico
Sangre, Mercromina, Yodo	Oxidante: Agua oxigenada

Todos los productos indicados en la tabla se pueden encontrar fácilmente en droguerías y centros comerciales habituales.

## Especial para porcelánicos pulidos:

Una vez instalado todo el material y habiendo limpiado los restos de cemento, rejuntado y cualquier material de obra, en algunos productos pulidos, debido al tratamiento superficial de inertización "anti manchas" que se le realiza, puede observarse la presencia de una película "grasa" en la superficie de las piezas. En caso de presentarse esta situación, Roca recomienda la limpieza de la superficie con productos de limpieza en seco (detergentes en polvo), y una vez eliminada esa fina película protectora proceder a la limpieza del producto de la forma anteriormente indicada. Por otro lado, en condiciones extremas de iluminación se pueden producir reflejos y sombras debido al alto grado de brillo y las características del producto.

Se recomienda limpiar las manchas de forma inmediata.

Per mantenere la bellezza e l'eleganza della ceramica Roca, si consiglia la pulizia giornaliera del materiale mediante l'uso di sistemi convenzionali.

Per la rimozione dei resti di polvere e solidi: spazzatura o aspirazione.

Si raccomanda di non usare mop catturapolvere con silicone e cere.

Il lavaggio della superficie deve essere effettuato con sapone neutro e la quantità d'acqua calda raccomandata dal produttore.

Non usare prodotti per la pulizia come brillantanti, cere o additivi simili in quanto con il passare del tempo possono creare una pellicola impermeabilizzante sulla ceramica che ne altera l'aspetto della superficie.

Si consiglia vivamente, accedendo da strade, terrazze o giardini, l'uso di zerbini all'ingresso delle zone pavimentate per evitare l'introduzione di elementi abrasivi. Mantenerli puliti. Si raccomanda una particolare cura in zone prossime a spiagge o cantieri che possono essere causa dell'introduzione di sabbia e pietre.

Si consiglia di ricoprire con una protezione gli oggetti che, se trascinati, possono rigare il prodotto (piedi metallici di tavoli, sedie, ecc.), prestando particolare attenzione in caso di prodotti lucidi e satinati.

Nel caso in cui non sia possibile rimuovere lo sporco completamente, nella seguente tabella riportiamo gli agenti pulenti idonei per ciascun tipo di sporco:

Tipo di macchia	Agente pulente
Olio, inchiostro, pennarello, pomodoro, frutta, cioccolato, grasso	Solvente organico: alcol, acquaragia, acetone Detergente alcalino liquido o in polvere Bicarbonato
Catrame, gomma, bitume, vernice, graffito, cera, resine, pennarello, smalto per unghie	Solvente organico: alcol, acquaragia, acetone
Caffè, gelato, nicotina, vino	Detergente alcalino liquido o in polvere
Calce, cemento, birra, depositi metallici, bibite, succhi	Acidi diluiti: aceto, acido muriatico o acido cloridrico
Colla, gomma da masticare, gomma di pneumatico o di scarpa	Solvente organico: alcol, acquaragia, acetone Acidi diluiti: acido muriatico o acido cloridrico
Sangue, mercurocromo, iodio	Ossidante: acqua ossigenata

Tutti i prodotti indicati nella tabella si trovano facilmente presso drogherie e centri commerciali.

## Speciale per porcellanati levigati:

In caso di porcellanati tecnici levigati, una volta posato tutto il materiale e rimosso i resti di cemento, stucco e di qualsiasi altro materiale, in alcuni prodotti levigati - dovuto al trattamento della superficie con inertizzazione "antimacchia", - è possibile osservare la presenza di una pellicola "grassa" sulla superficie. In tal caso, Roca raccomanda di pulire la superficie con prodotti per la pulizia a secco (detergenti in polvere) e, una volta rimossa la fine pellicola di protezione, di procedere alla pulizia del prodotto come precedentemente indicato. Inoltre, in condizioni di illuminazione estreme possono verificarsi riflessi di luce, dovuto all'alto grado di brillantezza e alle caratteristiche del prodotto.

Para manter a beleza e a elegância da cerâmica Roca, é aconselhável a limpeza diária do material, através de sistemas convencionais.

Para a eliminação de restos de pó e sólidos: por varredura ou aspiração.

É recomendável não utilizar mopas agarra-pó com silicões e ceras.

A lavagem da superfície deve ser efetuada com sabão neutro e a quantidade de água quente recomendada pelo fabricante.

Não devem ser utilizados produtos de limpeza abrillantadores, céreos ou com aditivos similares, dado que, com o passar do tempo, podem deixar uma capa impermeabilizante sobre a cerâmica, que altera o aspecto superficial da mesma.

É absolutamente recomendável a colocação de capachos, que deverão permanecer limpos, nas entradas dos locais pavimentados, com ligação a ruas, terraços ou jardins, para evitar a entrada de elementos abrasivos. É também recomendável um cuidado especial em zonas próximas a praias ou obras que possam incluir areias e pedras.

É aconselhável colocar proteções nos objectos que, por arrasto, possam marcar o produto (pernas metálicas de mesas, cadeiras, etc.), tendo especial cuidado com produtos brilhantes e acetinados.

Se a sujidade não for eliminada completamente, sugerimos a consulta da tabela seguinte, onde se encontram os agentes de limpeza adequados a cada tipo de sujidade:

Tipo de mancha	Agente de limpeza
Óleo, Tinta, Rotulador, Tomate, Fruta, Chocolate, Gordura	Dissolvente orgânico: álcool, aguarrás, acetona Detergente alcalino líquido ou em pó Bicarbonato
Alcatrão, Borracha, Betume, Pintura, Graffiti, Cera, Resinas, Rotulador, Esmalte de unhas	Dissolvente orgânico: álcool, aguarrás, acetona
Café, Gelado, Nicotina, Vinho	Detergente alcalino líquido ou em pó
Cal, Cimento, Cerveja, Depósitos metálicos, Refrescos, Sumos	Ácidos diluídos: vinagre, ácido clorídrico ou ácido clorídrico
Cola, Pastilha elástica, Borracha de pneu ou sapato	Dissolvente orgânico: álcool, aguarrás, acetona
Sangue, Mercurocromo, Iodo	Oxidante: Água oxigenada

Todos os produtos indicados na tabela podem ser encontrados facilmente em drograrias e nos centros comerciais habituais.

#### Especial para produtos porcelânicos polidos:

No caso de produtos porcelânicos técnicos polidos, uma vez instalado todo o material, limpos os restos de cimento, rejuntamento e qualquer material de obra, em alguns produtos polidos - devido ao tratamento superficial de inertização "anti-manchas" que é realizado - poderá surgir uma película "gordurosa" na superfície das peças. Nesse caso, a Roca recomenda a limpeza da superfície com produtos de limpeza a seco (detergentes em pó) e, uma vez eliminada essa fina película protetora, proceder à limpeza do produto da forma anteriormente indicada. Por outro lado, em condições extremas de iluminação, podem produzir-se reflexos de luz devido ao elevado grau de brilho e às características do produto.

Pour préserver la beauté et l'élégance des carreaux en grès cérame Roca, il est recommandé de procéder au nettoyage quotidien du carrelage selon des méthodes conventionnelles.

Éliminer les poussières et solides en balayant ou par aspiration.

Ne pas utiliser d'attrape-poussière à la silicone ni à la cire.

Laver à l'eau chaude et au savon neutre, dans les proportions recommandées par le fabricant.

Ne pas utiliser de produits lustrants à la cire ou contenant des additifs similaires car ils sont susceptibles de déposer une couche imperméable altérant l'aspect superficiel du carrelage.

Il est vivement recommandé de placer des paillassons propres à l'entrée des zones carrelées (rue, terrasses, jardins) afin d'éviter l'introduction d'éléments abrasifs. Il est conseillé de veiller tout particulièrement aux zones proches de plages ou de travaux, sources potentielles de sable ou de graviers.

Il est conseillé de protéger les éléments susceptibles de marquer le carrelage tels que le piétement métalliques des tables et chaises, etc.), en veillant particulièrement aux produits brillants et satinés.

Si l'état du carrelage justifie un nettoyage plus approfondi, le tableau suivant présente les agents nettoyants adaptés à chaque type de tache:

Type de taches	Agent nettoyant
Huile, encre, feutre, tomate, fruits, chocolat, graisses	Solvant organique : alcool, WhiteSpirit, acétone Détergent alcalin liquide ou en poudre Bicarbonate
Goudron, caoutchouc, bitume, peinture, graffiti, cire, résines, feutre, vernis à ongles	Solvant organique : alcool, WhiteSpirit, acétone
Café, glaces, nicotine, vin	Détergent alcalin liquide ou en poudre
Chaux, ciment, bière, dépôts métalliques, rafraîchissements, jus de fruits	Acides dilués : vinaigre, acide chlorhydrique
Colle, chewing-gum, marque de pneu ou de semelle de chaussure	Solvant organique : alcool, WhiteSpirit, acétone Acides dilués : acide chlorhydrique
Sang, mercurochrome, iode	Oxydant : eau oxygénée

Tous les produits indiqués dans le tableau sont disponibles en drogueries et dans les grands magasins habituels.

#### Spécial pour le grès cérame poli :

Après la pose de carrelage en grès cérame technique poli, une fois les restes de ciment, de jointement ou autres nettoyés, certains produits polis peuvent présenter une pellicule grasse due au traitement superficiel « anti-taches ». Dans un tel cas, Roca recommande de nettoyer la surface à l'aide de produits de nettoyage à sec (détergents en poudre) puis, après élimination de la pellicule de protection, de procéder au nettoyage selon les méthodes indiquées plus haut. En outre, des conditions d'éclairage particulières peuvent provoquer des reflets dus à la grande brillance et aux caractéristiques du produit.

# Mantenimiento

Manutenzione | Manutenção | Maintenance | Entretien | Instandhaltung | Уход | 保养

To maintain the beauty and elegance of Roca tiles, we advise daily cleaning with conventional methods.

To remove remains of dust and solids: sweeping or vacuum cleaning.

We do not recommend using dust-catching mops with silicones and waxes.

The surface must be washed with neutral soap and the amount of hot water recommended by the manufacturer.

Do not use cleaning products containing wax, brighteners or similar additives, since in time they may leave a waterproof layer on the tile which alters its surface appearance.

We strongly recommend the use of doormats, which must remain clean, in entrances to tiled areas, whether from the street, terrace or garden, to prevent the entry of abrasive elements. We recommend special care in zones close to beaches or construction works, where there is a risk of sand and stones being brought in.

It is advisable to place protections on objects which can mark the tiles if dragged (metal table legs, chairs, etc.), being especially careful with shiny and satin-finished products.

If the tiles cannot be cleaned completely, we provide the following table showing suitable cleaning agents for each type of dirt:

Type of stain	Cleaning agent
Oil, ink, marker pen, tomato, fruit, chocolate, grease	Organic solvents: alcohol, turpentine, acetone Alkaline detergents in liquid or powder form Bicarbonate
Tar, rubber, shoe polish, paint, graffiti, wax, resins, marker pen, nail varnish	Organic solvents: alcohol, turpentine, acetone
Coffee, ice cream, nicotine, wine	Alkaline detergents in liquid or powder form
Lime, cement, beer, metal deposits, soft drinks, fruit juices	Diluted acids: vinegar, hydrochloric acid
Glue, chewing gum, tyre or shoe rubber	Organic solvents: alcohol, turpentine, acetone Diluted acids: hydrochloric acid
Blood, mercurina, iodine	Oxidant: oxygenated water

All the products shown in the table can easily be found in ordinary household stores and shopping centres.

## Special for polished porcelain tiles:

In the case of polished porcelain tiles, once all the material has been laid and the remains of cement, pointing and any other building material have been cleaned off, on some polished surfaces the presence of an 'oily' film can be observed due to the 'stain-resistant' inertisation treatment they are given. If this occurs, Roca recommends cleaning the surface with dry cleaning products (detergents in powder form) and, once this fine protective film has been eliminated, cleaning the tiles as indicated above. In extreme lighting conditions, light reflections may occur due to the high degree of brightness and the characteristics of the product.

It is recommended to remove stains immediately.

Um die Schönheit und Eleganz der Roca Keramikfliesen zu bewahren, wird die tägliche Reinigung des Materials mit konventionellen Mitteln empfohlen.

Für die Reinigung von Staubresten und Feststoffen: kehren oder saugen.

Die Verwendung von Staubwedeln mit Silikon und Wachs wird nicht empfohlen.

Die Reinigung der Oberfläche muss mit neutraler Seife erfolgen und die vom Hersteller empfohlene Wassermenge eingehalten werden.

Verwenden Sie keine Poliermittel oder Reinigungsmittel mit Wachs oder ähnlichen Zusatzstoffen, da sich im Laufe der Zeit möglicherweise eine wasserdichte Schicht auf der Keramikfliese bildet, die das Aussehen der Fliese verändern kann.

Das Auslegen von sauberen Fußmatten an den Eingängen zu gefliesten Bereichen, d. h. am Hauseingang und an den Eingängen zu Terrasse oder Garten, wird dringend empfohlen, um keine scheuernde Gegenstände in das Haus zu bringen. Besondere Vorsicht ist in Strand- oder Baustellennähe aufgrund des Sandes und kleiner Steinchen geboten.

Es wird empfohlen, Gegenstände, die die Fliesen durch Reibung beschädigen könnten, mit Schutzmaterial auszustatten (Metallbeine von Tischen und Stühlen...), vor allem im Fall von polierten und satinierten Ausführungen.

Falls nicht aller Schmutz vollständig entfernt werden kann, richten Sie sich bitte nach folgender Tabelle, in der die geeigneten Reinigungsmittel für jede Art von Schmutz aufgelistet sind.

Fleckenart	Reinigungsmittel
Öl, Farbe, Filzstift, Tomate, Obst, Schokolade, Fett	Organisches Lösungsmittel: Alkohol, Terpentin, Aceton Alkalisches Lösungsmittel, flüssig oder als Pulver Bikarbonat
Teer, Gummi, Schuhcreme, Farbe, Graffiti, Wachs, Harz, Filzstift, Nagellack	Organisches Lösungsmittel: Alkohol, Terpentin, Aceton
Kaffee, Eis, Nikotin, Wein	Alkalisches Lösungsmittel, flüssig oder als Pulver
Kalk, Zement, Bier, Metallspuren, Erfrischungsgetränke, Saft	Verdünnte Säuren: Essig, Salzsäure oder Chlorwasserstoffsäure
Kleber, Kaugummi, Reifengummi, Gummistriche durch Schuhsohlen	Organisches Lösungsmittel: Alkohol, Terpentin, Aceton Verdünnte Säuren: Essig, Salzsäure oder Chlorwasserstoffsäure
Blut, farbige Desinfektionsmittel wie z.B. Jodtinktur	Oxidationsmittel: Wasserstoffperoxid

Alle in der Tabelle aufgeführten Produkte erhalten Sie problemlos in Drogerien und gewöhnlichen Einkaufszentren.

## Speziell für polierte Feinsteinzeugfliesen

Nach dem Verlegen des Materials, dem Entfernen der Zementreste, der Fugenmasse und sonstigem Material kann im Falle von polierten technischen Feinsteinzeugfliesen aufgrund der durchgeführten Oberflächenbehandlung zur Fleckenbeständigkeit eine „Fettschicht“ auf der Oberfläche der Fliesen beobachtet werden. Ist dies der Fall, empfiehlt Roca eine Trockenreinigung der Oberfläche (Reinigungsmittel in Pulverform) und nach dem Entfernen der dünnen Schutzschicht die Reinigung der Fliesen in der zuvor beschriebenen Form. Bei extrem hellen Lichtverhältnissen können Lichtreflexe aufgrund des hohen Glanzgrades und den Eigenschaften des Produktes entstehen.

Для поддержания красоты и элегантности керамики «Roca» советуем ежедневно поддерживать чистоту материала, используя обычные средства.

Для удаления остатков пыли и твёрдого мусора: подметать или убирать пылесосом.

Рекомендуется не использовать швабры для собирания пыли, содержащие силикон и воск.

Поверхность следует мыть нейтральным моющим средством, используя для него такое количество воды, которое указано изготовителем.

Нельзя использовать чистящие средства для блеска, средства, содержащие воск или подобные элементы, так как со временем они могут образовать непроницаемый слой поверх керамики, что испортит вид плитки.

Настойчиво рекомендуем использование ковриков, которые должны содержаться в чистоте, на входе в помещения с плиточными полами, будь то вход с улицы, с балкона или из сада; это предотвратит попадание абразивных элементов на плитку. Рекомендуется обращать на это особое внимание там, где поблизости расположен пляж или ведутся ремонтно-строительные работы, откуда могут быть занесены песок и камни.

Советуем защищать предметы, перемещение по полу которых могло бы поцарапать плитку (металлические ножки столов, стульев и т.п.), обращая особое внимание на блестящие и лощёные продукты.

Если грязь не удаётся удалить полностью, советуем обратиться к следующей таблице, в которой приводятся чистящие вещества, подходящие для каждого вида загрязнения:

Вид пятна	Чистящее вещество
Масло, чернила, фломастер, томат, фрукты, шоколад, жир	Органический растворитель: спирт, скипидар, ацетон Щелочные моющие средства, как жидкие, так и порошки Бикарбонат
Гудрон, каучук, мазь для чистки обуви, краска, граффити, воск, смола, фломастер, лак для ногтей	Органический растворитель: спирт, скипидар, ацетон
Кофе, мороженное, никотин, вино	Щелочные моющие средства, как жидкие, так и порошки
Известь, цемент, пиво, металлические отложения, прохладительные напитки, соки	Растворимые кислоты: уксус, соляная кислота
Клей, жевательная резинка, шинная резина или резина от подошвы	Органический растворитель: спирт, скипидар, ацетон Растворимые кислоты: соляная кислота
Кровь, меркурохром, йод	Окислитель: Перекись водорода

Все продукты, приведённые в таблице, можно легко найти в аптеке или в обычных магазинах.

#### Специально для шлифованного керамогранита:

При работе с техническим шлифованным керамогранитом, после того, как был уложен весь материал и были убраны все остатки цемента, раствора и других ремонтно-строительных материалов, иногда из-за инертности поверхности, её обработки против пятен, на поверхности плиток может появиться «жирная» плёнка. В этом случае «Roca» рекомендует очистить поверхность продуктами сухой чистки (порошковые чистящие средства), и после удаления этой защитной плёнки, можно будет продолжить чистку плитки выше указанным способом. С другой стороны, при очень сильном освещении могут возникнуть отблески света, вызванные высокой степенью блеска и характеристиками продукта.

Для обеспечения Roca-плитки идеальной чистотой, рекомендуется использовать традиционные методы очистки.

Удаление пыли и твердых остатков: подметать или использовать пылесос.

Не рекомендуется использовать пылесосы с силиконом и воском.

Поверхность плитки следует мыть нейтральным моющим средством, используя для него такое количество воды, которое указано изготовителем.

Не рекомендуется использовать швабры для собирания пыли, содержащие силикон и воск.

Нельзя использовать чистящие средства для блеска, средства, содержащие воск или подобные элементы, так как со временем они могут образовать непроницаемый слой поверх керамики, что испортит вид плитки.

Настойчиво рекомендуем использование ковриков, которые должны содержаться в чистоте, на входе в помещения с плиточными полами, будь то вход с улицы, с балкона или из сада; это предотвратит попадание абразивных элементов на плитку. Рекомендуется обращать на это особое внимание там, где поблизости расположен пляж или ведутся ремонтно-строительные работы, откуда могут быть занесены песок и камни.

Если грязь не удаётся удалить полностью, советуем обратиться к следующей таблице, в которой приводятся чистящие вещества, подходящие для каждого вида загрязнения:

Вид пятна	Чистящее вещество
Масло, чернила, фломастер, томат, фрукты, шоколад, жир	Органический растворитель: спирт, скипидар, ацетон Щелочные моющие средства, как жидкие, так и порошки Бикарбонат
Гудрон, каучук, мазь для чистки обуви, краска, граффити, воск, смола, фломастер, лак для ногтей	Органический растворитель: спирт, скипидар, ацетон
Кофе, мороженное, никотин, вино	Щелочные моющие средства, как жидкие, так и порошки
Известь, цемент, пиво, металлические отложения, прохладительные напитки, соки	Растворимые кислоты: уксус, соляная кислота
Клей, жевательная резинка, шинная резина или резина от подошвы	Органический растворитель: спирт, скипидар, ацетон Растворимые кислоты: соляная кислота
Кровь, меркурохром, йод	Окислитель: Перекись водорода

Все продукты, приведённые в таблице, можно легко найти в аптеке или в обычных магазинах.

#### Специально для полированного керамогранита:

При работе с техническим полированным керамогранитом, после того, как был уложен весь материал и были убраны все остатки цемента, раствора и других ремонтно-строительных материалов, иногда из-за инертности поверхности, её обработки против пятен, на поверхности плиток может появиться «жирная» плёнка. В этом случае «Roca» рекомендует очистить поверхность продуктами сухой чистки (порошковые чистящие средства), и после удаления этой защитной плёнки, можно будет продолжить чистку плитки выше указанным способом. С другой стороны, при очень сильном освещении могут возникнуть отблески света, вызванные высокой степенью блеска и характеристиками продукта.

#### Специально для матового керамогранита:

При работе с техническим матовым керамогранитом, после того, как был уложен весь материал и были убраны все остатки цемента, раствора и других ремонтно-строительных материалов, иногда из-за инертности поверхности, её обработки против пятен, на поверхности плиток может появиться «жирная» плёнка. В этом случае «Roca» рекомендует очистить поверхность продуктами сухой чистки (порошковые чистящие средства), и после удаления этой защитной плёнки, можно будет продолжить чистку плитки выше указанным способом. С другой стороны, при очень сильном освещении могут возникнуть отблески света, вызванные высокой степенью блеска и характеристиками продукта.

**Roca**

The Roca logo consists of the word "Roca" in a bold, sans-serif font. Below the text is a stylized graphic element consisting of a thick, white, horizontal bar that curves upwards at both ends, resembling a wave or a stylized underline.
